Professional Summary

Motivated Computer Science and Data Science Engineering student with a strong interest in programming, data analysis, machine learning, and emerging technologies. Skilled in Python, C, Java, SQL, and data visualization. Experienced in developing academic projects involving data analysis, visualization, and real-world problem solving. Interested in applying technical and analytical skills to practical software and data-driven applications.

Skills

Programming Languages: Python, C, Java, C++

Data Science & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Data Analysis, Data Visualization

Database: MySQL, SQL

Web Technologies: HTML, CSS

Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

Core Concepts: Data Structures, Object-Oriented Programming, DBMS, SQL, Basic Machine Learning

Soft Skills: Problem Solving, Communication, Teamwork, Time Management

Education

Bachelor of Engineering in Data Science [BITM]	2025 – 2029 CGPA: 8.5/10
Pre-University Course (PUC) [PUC NATIONAL COLLEGE]	2022 – 2024 CGPA: 9.4/10

Projects

Student Performance Prediction and Analysis	2026
- Developed a Python-based data analysis project to study factors affecting student academic performance. - Used Pandas and NumPy for data cleaning, preprocessing, and analysis. - Created data visualizations using Matplotlib and Seaborn to identify performance patterns and trends. - Implemented a basic machine learning model to predict student performance based on selected academic factors.	
Sales Data Analysis Dashboard	2026
- Developed a sales analytics project using Python to analyze revenue, profit, product performance, and sales trends. - Cleaned and processed sales datasets using Pandas. - Created visualizations to identify top-performing products and monthly sales patterns. - Generated meaningful business insights from the analyzed data to support data-driven decision-making.	
Smart Water Management System	2025
- Designed a smart water management concept to monitor water usage and reduce unnecessary consumption. - Developed a system workflow for monitoring water levels and identifying excessive water usage. - Proposed automated alerts to notify users when water levels or consumption cross predefined limits. - Designed the system with a focus on water conservation and efficient resource management.	

Awards & Achievements

Academic Excellence

- Maintained a CGPA of 8.57/10 in B.E. Data Science.

Academic Projects

- Developed academic projects involving C programming, Python, data analysis, and problem solving.

Technical Development

- Gained practical experience in programming, data analysis, visualization, and database concepts through academic work.

Certifications

- Python for Data Science – IBM / Coursera
- Programming in Java – NPTEL

- Python Essentials 1 – Cisco Networking Academy
